China

Dear Jerry:

As a successful distributor of UTMD's neonatal products, I would like to bring a new product, Nutri-Lok®, to your attention.

Nutri-Lok is a family of locking enteral feeding-only extension sets and oral dispensing syringes that:

- Will not mate with a female luer IV line connector
- Ensures a secure connection that will not accidentally slip apart
- Is compatible via slip fit with other oral dose enteral feeding catheters, but only locks with Nutri-Cath®

I have enclosed a product brochure, as well as the Neonatal/Pediatric Intensive Care family brochure for your reference.

This is a concept that is rapidly being adopted by hospitals in the U.S., supported by the Joint Commission on the Accreditation of Health Care Organizations (JCAHO) Sentinel Event Alert 36 (copy enclosed). We think that health care providers in your country may also find Nutri-Lok® very important. If you have any questions regarding what is driving the enteral-only feeding system concept or would like pricing, please contact either Bruce Wilson, International Sales Manager at extension x. 4121 or me directly.

Best regards,

Melissa Wayman
Neonatal Product Manager
